

## crash when trying to execute reproject raster to view projection

OS: Windows XP Prof SP2, gvSIG 1.9b build 1237

I have loaded one vector- layer (UTM zone 42, WGS 84, EPSG : 32642) into a predefined view with same projection.

Secondly I wanted to load the raster layer (SRTM\_f03\_n037e069.tif) with help of the function “reproject raster to view projection” that occurs in a window if trying to load a raster that differs from the view projection.

After pressing “OK”, the program crashes.

### gvSIG.log:
